

A heatmap visualization of a 37x37 matrix. The x and y axes are both labeled from 0 to 35. The matrix shows a strong diagonal pattern, with the highest values (yellow) concentrated along the main diagonal. The values decrease as they move away from the diagonal, transitioning through green and blue to dark purple in the off-diagonal regions. The color bar on the right indicates a scale from dark purple (low values) to yellow (high values).
